

AMENDMENT TO THE CLAIMS

1. **(Currently Amended)** A positioning kit for use in limiting movement of a patient's legs comprising:

two boots, each capable of being secured around a foot and a lower leg of a patient; ~~and~~
at least one fastening strap capable of securing said boots together; and
wherein said boots are composed of breathable foam.

2. **(Original)** The positioning kit of claim 1 further comprising a leg strap capable of holding the patient's legs together.

3. **(Original)** The positioning kit of claim 2 wherein said leg strap comprises a cushion and straps capable of holding the patient's legs against said cushion.

4. **(Original)** The positioning kit of claim 2 wherein said leg strap is located adjacent to the patient's knees.

5. **(Cancelled)**

6. **(Original)** The positioning kit of claim 1 wherein each said boot further comprises:

a lower wrap capable of wrapping around said foot;
an upper wrap capable of wrapping around said lower leg;
a seam securing said lower and said upper wraps together; and
closure strips capable of securing said wraps around said foot and said lower leg.

7. **(Original)** The positioning kit of claim 6 wherein each said boot further comprising an ankle strap capable of wrapping around a patient's ankle.

8. **(Original)** The positioning kit of claim 6 wherein said closure strips are hook fasteners capable of attaching to a pile surface on said boot.

9. **(Original)** The positioning kit of claim 1 wherein said fastening straps comprise hook fasteners capable of attaching to a pile surface on said boots.

10. **(Original)** The positioning kit of claim 1 further comprising double-sided hook fasteners capable of attaching to a pile surface on said boots.

11. **(Original)** A positioning kit for use in limiting movement of a patient's hip comprising:

two boots, each capable of being secured around a foot and a lower leg of a patient, wherein each said boot comprises a lower wrap capable of wrapping around said foot, an upper wrap capable of wrapping around said lower leg, a seam securing said lower and said upper wraps together, and closure strips capable of securing said wraps around said foot and said lower leg; and

at least one fastening strap capable of securing said boots together.

12. **(Original)** The positioning kit of claim 11 further comprising a leg strap capable of holding the patient's legs together.

13. **(Original)** The positioning kit of claim 12 wherein said leg strap comprises a cushion and straps capable of holding the patient's legs against said cushion.

14. **(Original)** The positioning kit of claim 12 wherein said leg strap is located adjacent to the patient's knees.

15. **(Original)** The positioning kit of claim 1 wherein said boots are composed of breathable foam.

16. **(Original)** The positioning kit of claim 11 wherein each said boot further comprising an ankle strap capable of wrapping around a patient's ankle.

17. **(Original)** The positioning kit of claim 11 wherein said closure strips are hook fasteners capable of attaching to a pile surface on said boot.

18. **(Original)** The positioning kit of claim 11 wherein said fastening straps comprise hook fasteners capable of attaching to a pile surface on said boots.

19. **(Original)** The positioning kit of claim 11 further comprising double-sided hook fasteners capable of attaching to a pile surface on said boots.

20. **(Original)** A positioning kit for use in limiting movement of a patient's legs comprising:

two boots, each capable of being secured around a foot and a lower leg of a patient;
at least one fastening strap capable of securing said boots together; and
a leg strap capable of holding a patient's legs together.

21. **(Original)** The positioning kit of claim 13 wherein said leg strap comprises a cushion and straps capable of holding said legs against said cushion.

22. **(Original)** The positioning kit of claim 21 wherein said leg strap is located adjacent to the patient's knees.

23. **(Original)** The positioning kit of claim 13 wherein said boots are composed of breathable foam.

24. **(Original)** The positioning kit of claim 13 wherein said boot further comprises:
a lower wrap capable of wrapping around said foot;
an upper wrap capable of wrapping around said lower leg;
a seam securing said lower and said upper wraps together; and
closure strips capable of securing said wraps around said foot and said lower leg.

25. **(Original)** The positioning kit of claim 24 further comprising an ankle strap capable of wrapping around a patient's ankle.

26. **(Original)** The positioning kit of claim 24 wherein said closure strips comprise hook fasteners capable of attaching to a pile surface on said boot.

27. **(Original)** The positioning kit of claim 26 wherein said fastening straps comprise hook fasteners capable of attaching to said pile surface on said boots.

28. **(Original)** The positioning kit of claim 27 further comprising double-sided hook fasteners capable of attaching to said pile surface on said boots.

29. **(Currently Amended)** A positioning kit for use in limiting the movement of a patient's legs comprising:

two ~~boot~~ boots, each capable of being secured around a foot and a lower leg of a patient, each said boot comprising, a lower wrap capable of wrapping around said foot, an upper wrap capable of wrapping around said lower leg, a seam securing said lower and said upper wraps together, an ankle strap capable of wrapping around a patient's ankle, and closure strips capable of securing said wraps around said foot and said lower leg;

wherein said closure strips are hook fasteners capable of attaching to a pile surface on said boot;

fastening straps capable of securing said boots together, wherein said fastening straps comprise hook fasteners capable of attaching to said pile surface on said boots and double-sided hook fasteners disposed between said boots and capable of attaching to said pile surface on each of said boots;

a leg strap capable of holding a patient's legs together, said leg strap comprising a cushion between the legs and straps holding the legs against said cushion; and

wherein said cushion is positioned between a patient's knees.

30. **(Original)** The positioning kit of claim 29 wherein said boots and said leg strap are made of thick breathable foam.

31. **(Original)** The positioning kit of claim 29 wherein said first pile surface is integral with said second pile surface.

32. **(Currently Amended)** A method of limiting movement of a patient's legs comprising the steps of:

securing a boot around at least a portion of a foot and a lower leg of said patient first leg;
securing a second boot around at least a portion of a foot and a lower leg of said patient's second leg; and

securing said first and said second boots together; and
securing a leg strap around said patient's legs.

33. **(Cancelled)**

34. **(Original)** The method of claim 33 wherein said leg strap is located just below a patient's knees.

35. **(Original)** The method of claim 32 wherein said first and said second boots are secured together by securing fastening straps to each said boot.
